

CONNECT

4sight Connect is a leading connectivity solution for exchanges, ECNs and related services and applications. 4sight Connect is the high speed market connectivity solution used by top investment banks to connect their trading systems to any financial market.

4sight Connect

The complete market connectivity solution

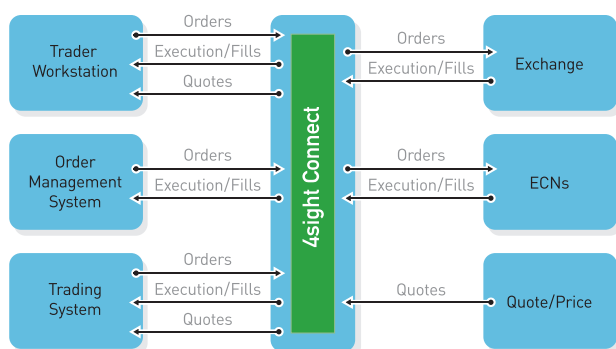

Connect offers a low latency platform for sending and receiving market data, quotes, orders and trade reports. It presents a simple consistent interface, shielding the client applications from the complexities of the target markets and protecting them from changes to the exchanges' API's, saving time and freeing up valuable IT resources.

A flexible connectivity solution

Based on a flexible modular architecture offering scalability and reliability, 4sight Connect offers generic components for client access and data management, with connectivity modules tailored to the specific protocols of the individual markets. The 4sight Connect system supports interactive messaging and high volume data feeds across all major markets through a single consistent API. Multiple client applications can connect to one Connect server, sharing exchange connections and data, offering an economical solution to market connectivity.

Architecture

The system is available on Solaris, Linux and Windows platforms. Client applications can connect to the Connect server via a link library, available on C, C++, Java, FIX and .NET. The platform also supports clients connecting from mixed platforms in a distributed environment. Unlike other solutions 4sight Connect simply offers connectivity so is ideal for institutions, or vendors with complementary solutions, that are looking to connect an existing OMS or any other trading system to an exchange.

Features:

- Low latency
- Simple consistent API
- High performance data caching
- Hot standby solution with seamless failover
- Flexible message routing
- Reliable interactive messaging
- Supports high volume data feeds
- Configurable custom data transforms
- Supports FIX, Swift and other industry standard protocols
- Multi-market connectivity
- Reliable, proven solution

Benefits:

- High availability
- Easily expandable to multiple markets
- Simplified system architecture
- Reduced software maintenance costs
- Share data and connections between multiple client applications
- Scalable architecture to meet changing needs

Supported Connections

4sight's Connect solution provides a wide range of market connections and services including:
